**Description**

The VERIS 8 is a two-way, full-range loudspeaker system suitable for use in a wide variety of fixed installations.

Compact but powerful, it is ideal for distributed systems such as those found in cafés, restaurants, shopping centers, and airports.

When paired with a subwoofer such as the VERIS 210S, a VERIS 8 system will produce high-fidelity, broad spectrum sound that belies its modest size.

In addition to distributed systems, the VERIS 8 is an excellent choice for ancillary delay applications. When used to augment a FOH system in such venues as auditoria, theatres, and houses of worship, delay speakers can significantly even-out the difference in sound pressure level from the front of the room to the rear of the room. Units may be positioned for underbalcony fill, overbalcony fill, or simply placed towards the rear of the seating areas. By deploying VERIS 8 loudspeakers in such a manner, the system designer will have far greater control over relative levels and relative tonal response when commissioning and equalizing the installation.

The VERIS 8 may be mounted to a wall or ceiling surface with a yoke bracket (included), suspended from its M6 threaded rigging points, or installed using an OmniMount™ Series 30 mounting device.

**Applications**
